#### The Fundamental Theorem of Calculus

The Fundamental Theorem of Calculus The Fundamental Theorem of Calculus shows that differentiation and Integration are inverse processes Consider the function  $f(t) = t$  The Fundamental Theorem of Calculus, Part 1 : If  $f$  is a continuous function on  $[a;b]$ , then the function  $g$  defined by  $g(x) = \int_a^x f(t) dt$

#### The Fundamental Theorem of Calculus

The Fundamental Theorem of Calculus The single most important tool used to evaluate integrals is called "The Fundamental Theorem of Calculus" It converts any table of derivatives into a table of integrals and vice versa Here it is Let  $f(x)$  be a function which is defined and continuous for  $a \leq x \leq b$

Part1: Define, for  $a \leq x \leq b$

### 12 The Fundamental Theorem of Calculus - Caltech AUTHORS

We will now give a complete proof of the fundamental theorem of calculus. The basic idea is as follows: Letting  $F$  be an antiderivative for  $f$  on  $[a, b]$ , we will show that if  $L$  and  $U$  are any lower and upper sums for  $f$  on  $[a, b]$ , then  $L \leq F(b) - F(a) \leq U$ . Since  $f$  is assumed to be integrable on  $[a, b]$ , the only
