KEY CONCEPT Positions of the Sun and Moon affect Earth.

Sunlight streams past Earth and the Moon, lighting one side of each body Beyond each body is a long, thin cone of darkness where no sunlight reaches—a shadow in space The two bodies are far apart, so they usually miss each other's shadow as the Moon orbits Earth However, if the Moon, the Sun, and Earth line up exactly, a shadow

Lunar Phase Simulator - RIC

Lunar Phase Simulator The changing appearance of the moon is the most commonly observed astronomical phenomenon The moon's cycle of phases has importance in almost all cultures, and even today we use periods of time — the week and month — which likely have their origin in lunar cycles
